

Our Services

Consultation

Bounce your ideas off us to make the most of our extensive knowledge in fabrication. Together we can come up with ways to reduce cost, improve design and make it overall easier for you.

Concept Creation

With skilled in-house CAD designers, we are able to create your idea and present it in an easy to understand DXF or PDF file. From there, you will be able to change and revise the drawing as much as you like until you are satisfied that it's ready for fabrication.

Fabrication

We will keep you updated every step of the way. From the finish on every weld to the colour of the powdercoat, we will confirm every detail to ensure absolute perfection.

Quality Assurance

Prior to dispatch, we will do a final check to ensure the quality is up to our standard. If it needs a weld fixed or the finish isn't up to spec, we won't hesitate to do it again, whether that involves sandblasting and re-powdercoating or re-making the item from scratch.

Installation

Not only do we fabricate and deliver our products, we also install when required. This puts the liability and responsibility back on us to do it right. Our team has the knowledge and experience to install correctly and provide finishing touches if required. It completes the service and takes the stress out of the process.

Creativity

Complex jobs. Difficult installations. Artistic beauty. Creativity is found across our wide breadth of work in our innovative ways of creating solutions.

Precision

Every cut, every angle contributes to the overall outcome. With items often being interdependent with corresponding or matching items from other suppliers, we always ensure accuracy is the main focus.

Scope

We have the knowledge and resources to fabricate with mild steel, aluminium, stainless steel, brass, copper and many more precious metals.
